## Election/Restrictions

## **DETAILED ACTION**

## Election/Restrictions

- 1. This application contains claims directed to the following patentably distinct species of the claimed invention consisting of three distinct species of Group I, claims 20-31, Group II, claims 32-36 and Group III, claims 37-38, as follows:
- I. Independent claims 20, 25, 28 and 29 are directed toward fiber grating comprising grating fiber core, a coat layer for coating an outer surface of cladding in which the coat layer is made from a UV transmitting resin and used for writing the grating and of curing by absorbing UV of a shorter wavelength band or a lower wavelength band than the specific wavelength band.
- II. Independent claims 33, 34 and 35 are directed toward grating with a predetermined grating pitch in which tensile strain applied along the fiber and a tension release step of shifting the grating pitch of the grating written in the core toward a shorter wavelength by releasing application of the tensile force after irradiation
- III. Independent claim 37 is directed toward grating fiber in which two portions of the fiber are fixed away, by winding reels, from each other for purpose of fiber grating and moving means for forcedly moving, by a motor, at least one of the pair of fixing means along the fiber away from and toward the other pair wherein winding reels fix the optical fiber with frictional resistance against the optical fiber.

Application/Control Number: 09/554,599

Art Unit: 2877

The reasons for restricting the claims 20-38 into three groups are because group I consisting of the independent claims 20, 25, 28 and 29 are directed toward fiber grating comprising grating fiber core, a coat layer for coating an outer surface of cladding in which the coat layer is made from a UV transmitting resin and used for writing the grating and of curing by absorbing UV of a shorter wavelength band or a lower wavelength band than the specific wavelength band; while, while group II, the independent claims 33, 34 and 35 are directed toward grating with a predetermined grating pitch in which tensile strain applied along the fiber and a tension release step of shifting the grating pitch of the grating written in the core toward a shorter wavelength by releasing application of the tensile force after irradiation; and while group III, independent claim 37 is directed toward grating fiber in which two portions of the fiber are fixed away, by winding reels, from each other for purpose of fiber grating and moving means for forcedly moving, by a motor, at least one of the pair of fixing means along the fiber away from and toward the other pair wherein winding reels fix the optical fiber with frictional resistance against the optical fiber are searchable in different classes/subclass.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, groups I, II and II are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Application/Control Number: 09/554,599

Art Unit: 2877

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin C Kianni whose telephone number is (703) 308-1216. The examiner can normally be reached on 9:30-18.00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on (703) 308-4881. The fax phone numbers for the organization where this application or proceeding is assigned are (703)308-5401 for regular communications and (703) 308-5401 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 305-4770.
